

HYGIENE AND PROPHILAXIS

Chlorex d

chlorhexidine 2%

MOUTHWASH

Characteristics

The product, especially useful to treat wide areas of oral mucosa, has mucoadhesive properties to protect oral lesions, antibacterial properties (Chlorhexidine), analgesic properties (Myrrh extract) and antiinflammatory properties (18 β -glycyrrhetic acid). The product is suitable to be used even after the oral hygiene.

Indications

Chlorex-D is indicated for treatment:

- aftae and mucositis (ex: after chemio and radioterapy);
- gingivitis and paradontitis;
- ulcers (viral, traumatic from orthodontic device, prosthesis, after biking);
- from thermal or chemical irritation;
- after dental surgery

Instruction for use

Rinse the mouth (10ml) for about 1 minute with Chlorex-D mouthwash twice daily for about 15 days. Do not drink or eat for 30 min.
